

Power Boost: Large Automatic Sprue Nipper with up to 6400 Newton *New nipper for large and hard sprues*

5 As a technology leader for gripper components, ASS Maschinenbau GmbH has developed a special pneumatic sprue nipper for heavy duty cutting.

The efficient design offers high power performance. The new sprue nipper works with 0,6 MP and allows cutting forces up to 6400N.

For supporting toughest duties the nipper blade is made of forged steel.

10 The body of the nipper is made of aluminium. Due to the power and flexibility, the new sprue nipper can be used in metal processing applications, too, apart from the plastics processing industry.
