

EVO ULTRA DIE:
THE MOST EFFICIENT MULTILAYER DIE HEAD

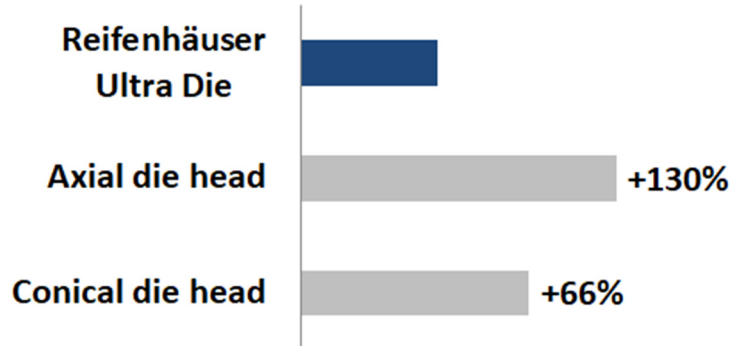

Why more layers increase your profits

Our patented EVO Ultra Die is the most efficient multilayer die head for barrier films – because it's the most compact barrier die in the market.

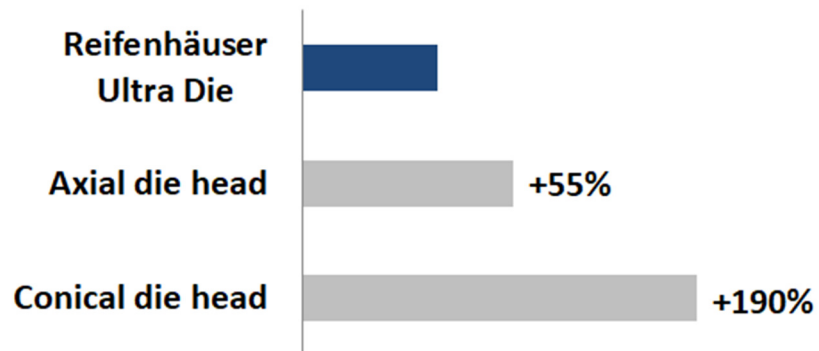

Thanks to the reduced melt volume and shorter heating paths, we achieve shorter heating times for start-up and change of raw materials, which generates significant savings.

Die head volume = purging time

Heating path = time for temperature changes

Comparison of die heads regarding purging time and time for temperature changes.
