Emne: Live Demonstration: World's First 18 Micron MDO-PE Film at the Reifenhäuser Technical Center - Register Now

LIVE DEMONSTRATION: REGISTER NOW!

Thinnest and Most Economical MDO-PE Blown Film on the Market

Reifenhäuser Blown Film's patented **EVO Ultra Stretch** MDO technology enables the world's first **MDO-PE film** with a thickness of only **18 micrometers**, which meets or exceeds all previous market standards in terms of mechanical properties, appearance and further processing.

Material consumption is reduced by around 25 percent compared to previous film thicknesses of 25 micrometers. This makes the production of **fully recyclable** mono-material structures significantly more **economical** – for example for all-PE stand-up pouches.

Don't believe it? Convince yourself!

Don't miss the last two chances in 2024 to join our LIVE Demonstration at our Technical Center in Troisdorf (Germany). We will open our doors on:

October 2nd and November 7th!

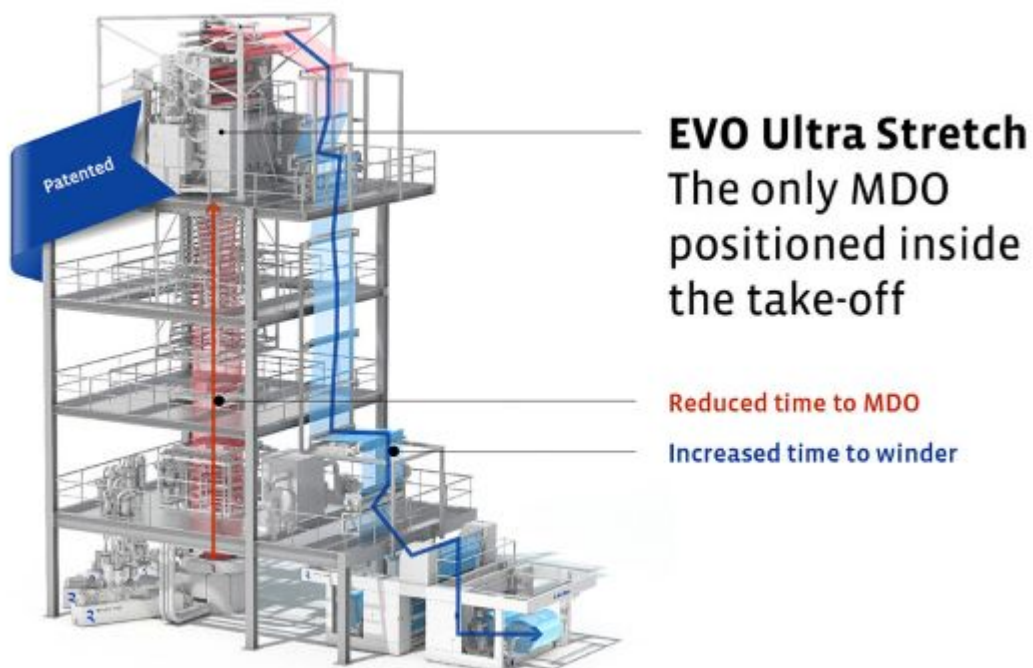

Contact us now to register for the event!

Kathrin Jakobs

Assistant to the Managing Director - Reifenhäuser Blown Film

Contact Us

The film is produced on a Reifenhäuser Blown Film line with the MDO **EVO Ultra Stretch**. Thanks to the patented position of the Ultra Stretch unit directly in the haul-off of the line, the film is stretched at the ideal time and with the first heat, making the process particularly efficient and stable.
